

Innovative Solutions for Your Intralogistics

Challenge:

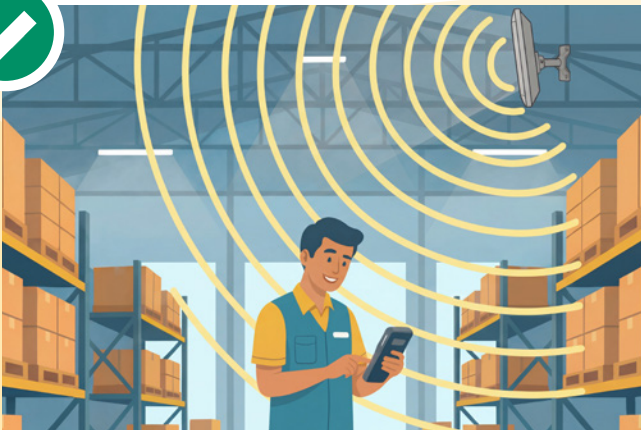

- ✗ Radio failure in the warehouse
- ✗ No stable communication despite plenty of access points

- ✗ No scanning/no data transmission possible
- ✗ App restart necessary
- ✗ Delays in the picking process

Solution: Use of IALTAG antennas

- ✓ Stable reception in every corner of the warehouse
- ✓ Less hardware (access points and wiring) necessary
- ✓ Trouble-free intralogistic processes

Your Benefits

► Cost Reduction

Your acquisition and operating costs for your industrial wireless infrastructure decrease due to less – but strategically deployed – hardware.

► Interference Immunity

Your wireless infrastructure is designed using antenna systems based on physical principles.

► Operational Safety

Less component failures due to reduced need of hardware.

► Energy Conservation

Less access points consume less energy.

► Universal use

Our approach works with access points from all manufacturers, thereby enabling the optimization of existing infrastructures as well.
